

Metex Inc. Announces Legacy Modernization Partnering Agreement with Fujitsu America at Gartner Application Architecture, Development & Integration Summit 2010

GARTNER AADI Summit 2010, Los Angeles, CA., November 15, 2010 – Metex Inc. (www.metex.com) today announced, from Gartner's AADI Summit 2010, the signing of a Partnering Agreement with Fujitsu America (<http://solutions.us.fujitsu.com>) to further broaden its Global Partner Network and expand the Fujitsu PROGRESSION™ offerings in IT Application Modernization.

Organizations and CIOs around the world are wrestling with the high cost of supporting aging legacy applications and limited capabilities to enhance or upgrade their application portfolios to meet market and business demands.

Metex's automated modernization solution allows organizations to leverage their existing source code and business logic written in languages like PowerBuilder, Oracle Forms, VB/VBA, Delphi, Centura, and C/C++, to generate native N-Tier, Java or .Net, SOA and Cloud compliant applications in a fraction of the time, cost and risk associated with implementing COTS solutions, manual re-writes or even undertaking an in-house migration.

"This agreement with Fujitsu America is a natural fit for Metex", said David Dai, Metex President and CEO. "We have worked globally with Fujitsu Australia and New Zealand over the past 3 years completing projects at Pacific National Railway, Queensland Department of Education and several other major projects currently in various stages of completion. With Fujitsu's global commitment to legacy modernization through its Progression offering and the Metex Modernization Solution, Fujitsu America is well positioned to deliver a proven and compelling end to end value proposition to its clients."

About Metex

Metex has been delivering application modernization solutions to its clients around the world for the past 12 years and has now completed over 100 modernization projects and transformed over 100 million lines of Client Server code, more than any other vendor. By combining a core team with extensive experience, the most advanced suite of application modernization technologies and the use of advanced automated tools, Metex is able to deliver high-quality, N-Tier Java or .NET, SOA and Cloud compliant code while minimizing project cost, risk and duration.
