

Senior Java Developer

Metex is the world's leading provider of client server modernization solutions. For 20 years Metex has been developing, supporting and modernizing mission critical applications for Governments, Fortune 500 corporations and software companies around the world. Metex offers unique and innovative solutions for Java and .NET platforms, a challenging environment and the opportunity to join an enthusiastic team.

As a Senior Java Developer, you will have a wide range of responsibilities with a focus on providing technical solutions that meet the needs of our clients. You will be part of a team of professionals that play a key role in implementing solutions and delivering true business value.

Your responsibilities may include providing leadership to increase Metex's standards of excellent and mentoring staff in using technical tools, implementing best practices and ensuring accuracy in estimating the time and effort required to complete a project.

Key Position Activities

- Provide technical input to product planning sessions and contribute to the product management lifecycle of the company's application portfolio.
- Deliver excellent code quality in a collaborative team environment, typically working in small development project groups.
- Communicate as required with internal and external clients to capture requirements and troubleshoot issues relating to development or support.
- Work with stakeholders including product managers, project managers, sales, marketing and senior management to ensure best practices, product direction and efficient design.
- Work with clients, both internal and external, to provide analysis on the best strategies for web-based map and browser development and product enhancements.
- Liaise with other software development team members to collaborate on and continuously improve Metex's technical capabilities, processes, and knowledge base.

Required Skills

- Clearly communicate ideas and technical suggestions to project team members and clients in both verbal and written English.
- Collaborate effectively on inter-related deliverables with project team members.
- Take responsibility for major technical deliverables to ensure quality, accuracy and punctuality.
- Reliable and able to self-manage your own activities and deliverables.
- Strong analytical skills that can be applied to analyze technical specifications and troubleshoot deployment issues.
- Enthusiastic and self-motivated.
- Proven ability in designing software applications following object-oriented methodologies.

Technical Experience

- Design and development of portal/web application solutions using the J2EE framework (JSP, EJB, JDBC, ANT, Struts, Spring & Hibernate).
- XML, Web Services, SOAP, Axis, JMS, Message Driven Bean (MDB) and Tomcat.
- Strong development experience with RDBMS such as Oracle and SQL.
- JBoss server, Weblogic and IBM Websphere.
- OOA, OOD, OOP and UML.
- Participated in at least one full-lifecycle, large enterprise web development (n-tier architecture) project in a J2EE environment.

Qualifications

- University degree in Computer Science or Engineering.
- Minimum 5 years of professional hands-on software development experience in a team environment.
- Minimum 4 years experience working as a programmer/analyst in a J2EE environment.
- Professional Java certification is a benefit.

If you are eager to join an industry leading company and possess the skills listed above, please email your resume and salary expectations to jobs@metex.com.

Metex would like to thank all applicants for their interest but will only contact a short list of potential candidates.
